

AMENDMENTS TO THE CLAIMS:

The following listing of claims replaces all prior listings, and all prior versions, of claims in the application.

LISTING OF CLAIMS:

1-19. (Canceled)

20. (New) A portable telecommunication apparatus for requesting the downloading of pages of information from a remote source comprising:

means for receiving the pages of information including encoded information identifying links to other pages;

a display for displaying the received pages and for displaying a caption indicative of a linked page in close proximity on the display to a fixed location input key;

the fixed location input key being at the edge of said display; and

a processor for forming said caption from encoded information identifying the linked page and for consistently associating the fixed location input key with the encoded information identifying a linked page during a display period such that actuation of the fixed location input key during the display period requests the linked page for download from the remote source.

21. (New) A telecommunication apparatus according to claim 20 comprising respective fixed location input keys and wherein the processor associates each fixed location input key with the encoded information identifying a linked page.

22. (New) A telecommunication apparatus according to claim 20 wherein the display period is the duration of the display of the received page.

23. (New) A telecommunication apparatus as claimed in claim 20 wherein the fixed location input key is a dedicated key.
24. (New) A telecommunication apparatus as claimed in claim 23 wherein the dedicated key is one of a group of alphanumeric keys provided for dialing.
25. (New) A telecommunication apparatus as claimed in claim 20 wherein the fixed location input key is a touch-sensitive area of the display.
26. (New) A telecommunication apparatus as claimed in claim 20 wherein the caption is provided immediately above the fixed location input key.
27. (New) A telecommunication apparatus as claimed in claim 20 wherein the remote source is a computer capable of connection to the World Wide Web (WWW).
28. (New) A telecommunication apparatus as claimed in claim 20 wherein the apparatus comprises a markup language decoder.
29. (New) A telecommunication apparatus as claimed in claim 20 wherein the association between the fixed location input key and the link is achieved by means of a particular tag in the page of information.
30. (New) A telecommunication apparatus as claimed in claim 20 wherein the apparatus is mountable in a vehicle.

31. (New) A telecommunication apparatus as claimed in claim 20 wherein the apparatus is a portable wireless telecommunication apparatus.

32. (New) A method of requesting downloading of pages of received information from a remote source in a portable apparatus, which comprises at least one fixed location input key located at an edge of a display of said portable apparatus comprising:

- receiving in the portable apparatus a first page of information including encoded information identifying at least one link to a second page, the at least one link comprising a visual element indicative of the second page and a location element to be used for downloading the second page;

- assigning at least one link from the encoded information to a respective fixed location input key among said at least one fixed location input key;

- separating the visual and location elements for the at least one assigned link;

- displaying on the display of said portable apparatus said first page of information and the visual element for the at least one assigned link, said visual element being displayed in close proximity on the display to the respective at least one fixed location input key;

- a user actuating a fixed location input key during a display period;

- determining the link assigned to the actuated fixed location input key;

and

- downloading the second page based on the location element comprised in the determined link.

33. (New) A method according to claim 32, wherein the visual element for the at least one assigned link is provided above the at least one fixed location input key.

34. (New) A method according to claim 32 wherein the remote source is a computer capable of connection to the World Wide Web (WWW).

35. (New) A computer program code for performing steps when executed on a data processing system comprising:

receiving in a portable apparatus, comprising at least one fixed location input key at an edge of a display of said portable apparatus, a first page of information including encoded information identifying at least one link to a second page, the at least one link comprising a visual element indicative of the second page and a location element for downloading the second page;

assigning at least one link from the encoded information to a respective fixed location input key;

separating the visual and location element for at least one assigned link in the encoded information;

displaying on said display said first page of information and the visual element for the at least one assigned link, said visual element being displayed in close proximity on the display to the respective at least one fixed location input key;

a user actuating a fixed location input key during a display period;

determining the link assigned to the actuated fixed location input key;

and

downloading the second page based on the location element comprised in the determined link.

36. (New) The computer program according to claim 35, wherein said computer program is stored on a computer readable medium.

37. (New) The computer program according to claim 35, wherein said computer readable medium is a removable memory card.

38. (New) The computer program according to claim 35, wherein said computer readable medium is a magnetic or optical disk.

39. (New) A computer program according to claim 35, wherein the visual element for the at least one assigned link is provided above an at least one fixed location input key.

40. (New) A computer program according to claim 35 wherein the remote source is a computer capable of connection to the World Wide Web (WWW).

41. (New) A structure for specifying a hyperlink comprised on a hypertext page, the structure comprising:

an input key element for identifying a specific fixed location input key at an edge of a display on a portable apparatus;

a visual element indicative of a second hypertext page; and

a location element for identifying the second hypertext page.
